Shutters®
International, LLC

Premium Exterior Shutters

TACTICAL DESIGN, THOUGHTFUL METHODS

New Horizon Shutters was founded over 20 years ago with a mission to provide custom exterior shutters to markets around the world. We are the preferred choice among architects and building designers for our attention to detail and historical accuracy.

New Horizon Shutters International, LLC manufactures its unique and patented product that is made from the highest quality materials designed to last a lifetime with little or no maintenance, providing an alternative to wooden shutters.

We constantly strive to deliver the best performing shutters available. We do this through rigorous “real world” and laboratory testing where our shutters are subjected to intense wind, UV rays, salt, and humidity. When this extensive data is combined with over two decades of shutter manufacturing experience, you get the most durable and most aesthetically-pleasing shutters on the market.

New Horizon Shutters is known for our exceptional quality and high performance shutters. We manufacture a product that is cost effective, while meeting the scrutiny of architects, building codes, and historic review boards. Each shutter is engineered for ease of maintenance and beauty that stands the test of time.

Take a deeper look at why New Horizon Shutters has become the most trusted brand in the industry.

WHY NEW HORIZON SHUTTERS

If you're looking to take a page from history or create your own style, shutters can make a big impression and generate lasting value for your home.

Each shutter is manufactured to meet our standards and your specifications. Sound manufacturing practice and performance allows us to minimize waste and enables us to offer a shutter designed and engineered to last a lifetime.

Our dedication to excellence and innovation ensures precise craftsmanship and superb quality for each shutter we manufacture.

The combined strength of the materials we select for each shutter style and series results in an incredibly stable shutter.

The construction starts with an aluminum stile, which wraps around a structural PVC core for strength and durability. Once we combine our signature finishing process, you have one of the longest lasting exterior shutters on the market.

New Horizon Shutters has exclusive rights to finishing processes that far exceed industry standards for corrosion and durability with 26 standard colors and custom color matching. This process positions New Horizon Shutters as the most technologically advanced manufacturer in the entire shutter industry.

Our finish is a two-part process certified by the American Architectural Manufacturers Association in accordance with AAMA 2605. The base coat is a proprietary process that creates an everlasting bond to the shutter materials and the top coat. The top coat is Sherwin Williams Polane® two-part Solar Reflective Polyurethane Enamel.

Architectural Shutter Styles

STARTING POINT

Consider these shutters as your launchpad.

While we've spent years perfecting our shutters, our customization options are virtually endless and our Design Team will work with you to get what you want.

More shutter styles and images can be found on our website at www.NewHorizonShutters.com.

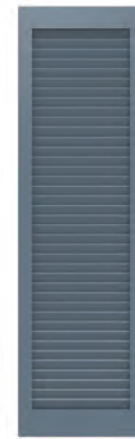

LOUVER

The simple genius of the Louver style shutter allows for airflow and light filtration which is why it is a popular style since the earliest shutters to present day.

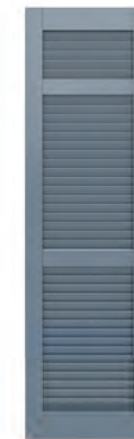

Louver style shutters can add immediate curb appeal and a fresh appearance to any home.

RAISED PANEL

The Raised Panel timeless style provides a stately and precise appearance to any home. The simplicity of the Raised Panel shutter adds a layer of interest and complexity to complement a traditional-styled home or any style of architecture. Create a new look with a timeless style with various configuration options.

BOARD AND BATTEN

The simple, geometric lines of the Board and Batten shutter make a welcoming and inviting entrance to a home.

Use the Board and Batten to make a statement or to create a new look to any home.

The modest design can be transformed into a contemporary style by experimenting with the batten placement.

FRAMED BOARD PANEL

The vertical lines on the Framed Board Panel shutter provides visual interest and classic elegance to any home.

RECESSED FLAT PANEL

The unadorned, yet versatile, design of the Recessed Flat Panel shutter enhances traditional and modern architecture.

BAHAMA

Bahama shutters, sometimes called Bermuda shutters, are perfect for structures that need protection from environmental elements.

There are a variety of applications for the Bahama shutter and different view settings satisfy the need for privacy or the desire to experience a full view.

“

“From our perspective here at Historical Concepts, the words “shutters” and “New Horizon” are synonymous. We have specified New Horizon’s shutters for over 12 years in a variety of locations: Florida, Georgia, Tennessee, New York, North and South Carolina, and we intend to keep adding to the list! Our clients have nothing but high praise for their products.”

—Jim Strickland, Historical Concepts

“New Horizon Shutters has the best shutter on the market and has now become our standard. It is a pleasure to specify their shutter due to the quality and their attention to detail.”

-Peter Zimmerman, Peter Zimmerman Architects

“I have specified New Horizon Shutters for almost 20 years. I recently visited a home in the Ford Plantation that I used their shutters on 15 years ago, and they all looked great. I would not consider using any other shutter.”

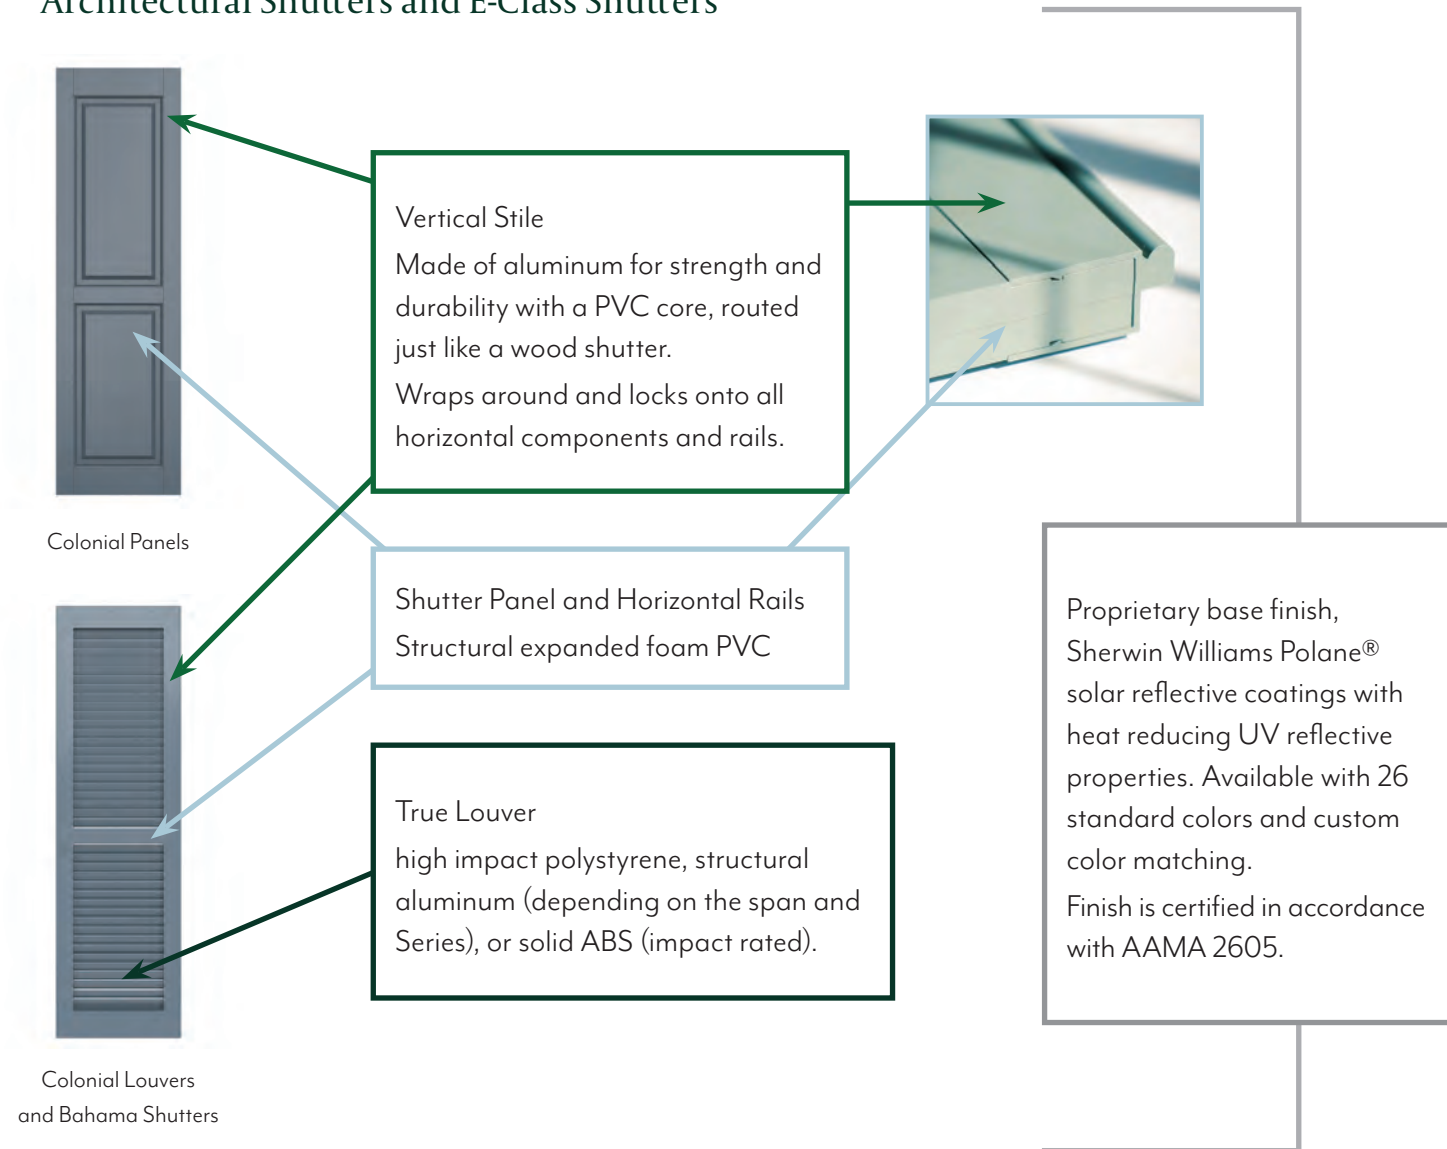

-Rick Wissmach, Wissmach Architects
